

Scissero GPT

NDA markups

NDA's are a crucial part of many legal transactions but marking them up can be a time-consuming and tedious task for the associates that work on them.

Scissero GPT can help significantly reduce the time spent on a first-round NDA markup, thereby allowing your firm to turn more markups in a shorter time.

- **Market-standard NDAs.** Ask Scissero GPT to take an NDA that is drafted by the disclosing party and mark it up to be more favorable to the receiving party. The markup you receive back will generate in under a minute with all amendments applied as tracked changes in complete, grammatically correct English sentences - as if done by a human lawyer.
- **Custom playbooks.** If you use NDAs frequently, you can specify your own custom playbooks, which Scissero GPT will follow when marking up the NDA.
